

# Pristine®

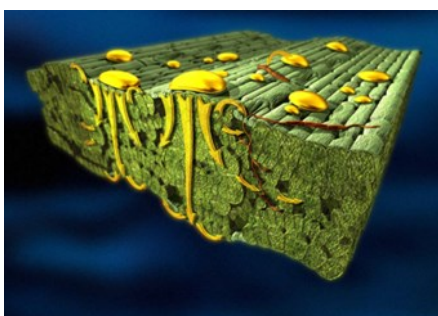

## Fungicide

Offers apple and pear growers long lasting crop protection through systemic and surface fungicidal activity.

**Pristine** fungicide delivers optimum protection against powdery mildew, black spot (scab) and *Alternaria* (leaf blotch and fruit blotch) in apples and black spot (scab) in pears.

The two modes of action deliver effective results with the benefits of built in resistance management.

**Pristine** inhibits spore germination, mycelial growth and sporulation of the fungus on the leaf surface. **Pristine** has a translocation mechanism that allows for optimum coverage throughout the leaf.

Protectant movement within the plant tissue.

**Pristine** deprives fungal cells of their energy source and eliminates the availability of chemical building blocks for synthesis of essential cellular components. It also interferes with cell respiration and the production of energy.

**Pristine** should be used as part of a regular fungicide programme.

Do not apply more than 3 applications of **Pristine** or any Group 11 fungicide per season.

Application recommendations:

Always refer to the label for further directions

### Benefits of using Pristine:

WG (Wettable Granule) formulation of two active ingredients to effectively control disease in apples and pears.

Locally systemic and translaminar protectant.

Two fungicide groups for effective resistance management – Group 7 and Group 11.

Low russet risk with improved fruit finish.

Effective rainfastness, rainfast when dry.

14 day withholding period.

Available in a 2.5 kg pack.

Use rate: 40g/100L water (dilute spray).

### Black spot (scab) prevention

First application is recommended at spurburst stage followed by applications 7-10 days later.

### Powdery mildew prevention

**Pristine** is recommended for protective applications starting at pink stage with applications 7-10 days later.

### Alternaria prevention

**Pristine** to prevent *Alternaria* should begin after blossom and during early fruit development.
