

Nodulaid™ N/T

Liquid Soybean Inoculant

GROUP H

**FOR USE AS A SEED TREATMENT
STORE AT 4-6° C**

For inoculating up to 1000kg of Soybean Seed
1 x 3 Litre Nodulaid N/T Rhizobium Liquid Inoculant
1 x 120ml bottle of Nodulating Trigger

N/T Nodulating Trigger, a biological fertiliser for increased plant health and yields N/T Nodulating Trigger is a microbial supplement for plant growth containing the naturally occurring bacteria, *Bacillus subtilis*. The *Bacillus subtilis* acts as a biological fertiliser to stimulate plant growth through a number of mechanisms including niche exclusion, phytohormone production and nutrient competition. The bacteria colonise the developing root system, establishing itself quickly on the seed and root surface. As the root system develops, the bacteria grow with the roots promoting the crop development throughout the growing season resulting in a higher yield potential. N/T Nodulating Trigger has been shown to increase the amount of nodulation by nitrogen-fixing bacteria when used on many legumes. This improvement in nodulation is a result of healthier and more developed root system allowing more sites for nodules to form.

DIRECTIONS FOR USE: Apply as a liquid seed treatment

To treat 1000kg seed, add contents of N/T bottle to 3 litres of Nodulaid N/T Liquid Inoculant and shake container well before use. Apply directly over the correct weight of seed and mix until all seeds are coated. Do not over mix as seed coat could be damaged. Sow inoculated seed as soon as possible or within 24 hours to improve plant growth. When N/T is applied in combination with Nodulaid N/T Liquid Inoculant, it does not affect the growth promotion activity nor the viability of the Rhizobium. Combine the two products together and mix into a homogeneous mixture prior to application to the soybean seed.

PRECAUTION

Unless otherwise directed, do not mix inoculant with fertilisers, pesticides or nutrients which are not compatible with Rhizobia.

PRODUCT STORAGE

Store in a dry cool place. Avoid direct sunlight, and sow inoculated seed as soon as possible. **Do not allow products to freeze.** Once opened, use **within 24 hours**. Do not use inoculant that is past its expiration date or that has not been correctly stored.

WARRANTY

The product must be used strictly in accordance with the label directions and instructions. BASF accepts no liability or responsibility for any consequential loss or otherwise arising from failure to follow these direction and instructions. The liability of BASF is limited to that imposed by statutes and, in any case, the liability is strictly limited to replacement of the product or (at the option of BASF) the refund of the price paid.
