

Cabrio®

Fungicide

Apply twice over flowering, 10-14 days apart for control of rust.

Cabrio® is a group 11 fungicide registered for Rust (*Tranzschelia discolor*) in Almonds.

Cabrio fungicide offers growers long-lasting crop protection through systemic and translaminar fungicidal activity.

Benefits of using Cabrio

- Highly active against rust spore germination performing best as a preventative treatment.
- **Cabrio** can be applied while bees are foraging and is suitable in IPM programs for Almond orchards as it has no impact on beneficial insects and pollinators.
- Commence sprays at flowering, followed by a second **Cabrio** application 10–14 days later.
- Group 11 fungicide providing translaminar and systemic protective activity, binding with the leaf cuticle, diffusing through the leaf and entering untreated areas to provide lasting protection.
- **Cabrio** inhibits mycelium growth within the plant whilst binding to the waxy cuticle of the leaf resulting in excellent rainfastness, ensuring minimal loss of active ingredient in unfavourable environmental conditions.
- **Cabrio** offers extended protective fungicidal activity when used prior to disease development when conditions favour disease.
- **Cabrio** ensures that plants stay greener for longer, improving produce quality and final crop outcomes.
- Rainfast in one hour.
- **Cabrio** should be applied at 40ml/100L of water with either dilute or concentrate spraying after the rate adjustment.
